

# FELI TECHNOLOGY CO.,LTD

Dear Customer,

Thank you for using FELI Nut Butter Grinder. After operating the grinding process for some period of time, you might find the butter or paste gets thicker, contains less oiliness than the past and the front cap of the machine gets hotter than what you experienced. To ensure the quality and the efficiency of the grinding, FELI Technology recommends you to check the necessity of replacing the grinding disc set.

## Simple Diagnostics On The Grinding Disc Set

Make a visual inspection on the appearance of the grinding disc set. Touch the gears on the top of the grinding disc set. If the gears feel sharp, the grinding disc set is still in good condition.

## Gear Wear Symptoms

If the gears on the top of the disc set feel obtuse, the grinding disc set should be replaced. Please contact the manufacturer to purchase one set of grinding disc for the replacement.

## Instruction For Replacing the Grinding Disc Set

Use a screwdriver to remove the old disc on the grinder, and then screw and fix the new disc on the same place.

## **#316 STAINLESS STEEL GRINDING DISC SET**

The stainless grinding disc set is 4 times more durable than the copper grinding discs. It has a better acid corrosion resistance. The stainless grinding discs grind hard nuts and seeds into paste with great finesses.

### **GRINDING GUIDELINE**

1. Always roast nuts and seeds (tahini) before grinding to produce smooth butter. The oiliness of the nuts and seeds keeps the temperature low during the graining process and avoids discs wear out fast.
2. Nuts or seeds that do not contain oiliness or haven't been roasted cause poor fluidity to the paste. It causes also the grinding discs wear out easily and higher temperature during the grinding process.
3. For nuts and seeds that contain less oiliness like pumpkin seeds, almond, sunflower seeds, etc. It is suggested to mix them with nuts that are rich in oiliness or mix them with olive oil to help the grinding.
4. Unroasted sesames or not evenly roasted sesames cause poor fluidity to the grinding. It sometimes causes sesames stuck at the funnel. If this happens, sesames should be poured out for roasting before another grinding process. Do not grind sesames that are lack of oiliness and well roast seeds or nuts before grinding.

If you need to purchase the grinding disc sets as spare parts, please contact FELI TECHNOLOGY CO., LTD. We will provide you the fastest services.
